1. Akses alamat <https://31.220.6.155:7800/00ca5dfa>
2. Lakukan log-in menggunakan akun yang telah terdaftar
3. Akan masuk ke halaman dashboard berikut.

Halaman Home

Halaman Website

The screenshot shows the VPS Website management page. A red arrow points from the 'Website' menu item in the sidebar to the main content area. The main content area has a header 'Dashboard / Site Manager' and a warning message. Below this is a section for managing websites with tabs for 'PHP Project' and 'Node Project'. A table lists the managed websites with columns for Site name, Status, Back up, Document Root, Expired date, Note, PHP, SSL, Attack, and Operation.

Melihat daftar website yang terhubung dan pengaturan domain

After the website is created, the file owner will be set to [www], you can add your backup plan in after the site is successfully established, please[Cron]add scheduled backup tasks to the page!

PHP Project Node Project

Add site Default Page Default Website PHP CLI version Category manager Domain or Remarks

C. Membersihkan RAM

1. Buka halaman **Home**

2. Arahkan cursor pada **RAM Usage**, kemudian klik seperti pada gambar berikut.

The screenshot displays a server management dashboard. On the left is a dark sidebar with navigation links: Home, Website, FTP, Databases, Monitor, Security, Files, Terminal, Cron, App Store, Settings, and Log out. The main content area has a top header with account information, system details (Ubuntu 20.04.4 LTS), and running time. Below this is a 'Status' section with four circular progress indicators: Load status (4%, Running smoothly), CPU usage (0.5%, 4 Core(s)), RAM usage (50%, 13G / 77G), and another indicator (17%). The RAM usage indicator is highlighted with a red box and a red arrow pointing to it with the text 'Klik pada icon pesawat'. A tooltip 'Click to free RAM' is visible over the RAM usage indicator. Below the status section is an 'Overview' section with four boxes: Site (6), FTP (4), DB (6), and Security (0).
